

24. 用反证法. 若 $(f, f)^{\frac{1}{2}} = \max_{a \leq x \leq b} |f(x)|$ 是 $C([a, b])$ 中的内积, 不妨设 $a = 0, b = 1$, 则 $\forall \lambda$, 有

$$(\lambda f, g) = \frac{1}{4} \left(\max_{0 \leq x \leq 1} |\lambda f + g|^2 - \max_{0 \leq x \leq 1} |\lambda f - g|^2 \right).$$

上式左端关于 λ 是线性的; 若取 $f(x) = x^2, g(x) = x$, 设 $\lambda > 0$, 则上式右端等于

$$\frac{1}{4} \left[(\lambda + 1)^2 - \left(\frac{1}{4\lambda} - \frac{1}{2\lambda} \right)^2 \right] = \frac{1}{4} \left[(\lambda + 1)^2 - \frac{1}{16\lambda^2} \right],$$

这不是 λ 的线性函数, 矛盾.

25. 取 $f_0(x) = e^{-(T-x)} / \sqrt{(1 - e^{-2T})/2}$ 即可.

26. $\mathcal{D}^\perp = \{g \in L^2[-1, 1] | g(-x) = -g(x)\}$.

28. 记 $S_m = \sum_{j=1}^m \varphi_j/j$, $f = \sum_{j=1}^\infty \varphi_j/j$, 则 $S_m \xrightarrow{L^2} f \in L^2(E)$, $\|f\|^2 = \sum_{j \geq 1} \frac{1}{j^2}$. 又

$$\begin{aligned} \|S_{(m+1)^2} - S_{m^2}\|^2 &= \sum_{j=m^2+1}^{(m+1)^2} \int_E \frac{\varphi_j^2(x)}{j^2} dx \\ &= \sum_{j=m^2+1}^{(m+1)^2} \frac{1}{j^2} \leq \int_{m^2}^{(m+1)^2} \frac{dx}{x^2} = \frac{2m+1}{m^2(m+1)^2} \leq \frac{C}{m^3}, \end{aligned}$$

其中 C 是常数. 记 $g_m(x) = \sum_{j=1}^m |S_{(j+1)^2}(x) - S_{j^2}(x)|$. 由 Minkowski 不等式,

当 $m_1 < m_2$, 有

$$\begin{aligned} \|g_{m_1} - g_{m_2}\| &\leq \sum_{j=m_1+1}^{m_2} \|S_{(j+1)^2} - S_{j^2}\| \leq C \sum_{j=m_1+1}^{m_2} \frac{1}{j^{3/2}} < \int_{m_1}^{m_2} \frac{dx}{x^{3/2}} \\ &\leq C_1(m_1^{-1/2} - m_2^{-1/2}) \rightarrow 0. \end{aligned}$$

所以 $\exists g \in L^2(E)$, 使得 $g_m \xrightarrow{L^2} g$. 又 $g_m \leq g_{m+1}$, 所以 $g_m \xrightarrow{\text{a.e.}} g$. 于是

$$\lim_{m \rightarrow \infty} S_{m^2}(x) = f(x), \quad \text{a.e.}$$

若 $m^2 < p < (m+1)^2$, 则当 $m \rightarrow \infty$,
